PATENT

Confirmation No. 7529

Proposed claims:

1. (currently amended) A storage management system on a computer comprising a volume provider to map a logical storage volume onto one or more storage devices of an external storage subsystem, wherein the volume provider presents an application programming interface (API) for receiving storage access information that characterizes behavioral attributes of the logical storage volume.

6. (proposed) The storage management system of claim 1 wherein the volume provider configures the logical storage volume as a function of the storage access information and physical characteristics of the one or more storage devices of the external storage subsystem.

31. (newly proposed) The storage management system of claim 1, wherein the behavioral attributes are independent of physical characteristics of the one or more storage devices in the external storage subsystem.

11. (proposed) A method for managing one or more storage volumes of an external storage subsystem by a computer comprising:

receiving, via an application programming interface (API) presented by a volume provider on the computer, storage access information that characterizes volume behavioral attributes of one or more storage volumes; and

configuring, by the volume provider, one or more storage volumes of the external storage subsystem as a function of the storage access information and physical characteristics of the external storage subsystem.

29. (newly proposed) The method of claim 11, wherein receiving comprises:
receiving the storage access information from an application on the computer that does not have knowledge of the physical characteristics of the storage devices.

30. (newly proposed) The method of claim 11, wherein configuring comprises:
performing disk extent mapping, disk space allocation and mapping type selection based on the volume behavior attributes, wherein the storage access
